Perform Peripheral Intravenous (IV) Cannulation Program (HLTHPS009)

The program is evidence based and the techniques taught are designed to promote the best practice outcomes for patient care. This program has been designed to provide the student with the opportunity to gain or consolidate knowledge and skills in two key areas.

On completion of this course the student should be able to:
• Assess the need for cannulation and correctly identify pathology requests and client
• Perform a cannulation procedure
• Choose the appropriate size cannula
• Discuss the considerations that influence the correct selection of intravenous cannula size and insertion site
• Demonstrate the technique of peripheral intravenous cannula insertion, including securing the cannula in situ
• Manage the cannula until the time it is no longer required and removal of the cannula is to be performed
• Safely remove the IV cannula.

To achieve competency in this course, students must demonstrate competency performing IV cannulation in a simulated environment, competently complete an assessment covering essential knowledge and skills and complete workplace practice consisting of five IV Cannulation procedures under observation.
